TRAINING AND EXPERIENCES

September 2024 – Present

Programmer (Part Time)

- Created automated install scripts for various GitHub repositories, handling dependencies and environment configurations using Docker, Python, Bash and Git to streamline the process
- Troubleshoot and reproduce issues reported in GitHub repositories by running tests and examining code behavior and research to identify root cause of issues

New Media Services

March 21 2024 - September 21 2024

Junior Programmer

- Revamped and enhanced UI/UX for various web applications, implementing new features and optimizing user experience.
- Modified and optimized backend queries to improve performance, prevent data discrepancies, and ensure efficient data handling.
- Contributed to the development and optimization of major features, including handling complex data structures and exporting functionalities.
- Collaborated with teams to identify and resolve critical bugs, improving application stability and performance.
- Built and integrated APIs for third-party AI services, coordinated with clients for API integration, and managed related administrative tasks.
- Refactored legacy codebases to meet organizational standards, implemented containerization using Docker, and improved overall application architecture.
- Acted as a maintainer for projects, leading development efforts, managing codebases, and building new features from the ground up.
- Provided quick fixes and support for urgent issues, ensuring minimal downtime and seamless user experience.

New Media Services

March 5, 2024 – March 18, 2024

Training

- Completed the required training for onboarding, created an application using Laravel and React and Successfully presented the accomplished application.

NOAH Business Applications

January 24, 2023 – May 19, 2023

Quality Assurance (QA)

- Conducted manual testing of User Interfaces to ensure compliance with quality standards, identifying and rectifying defects or issues to enhance product/service quality.

PERSONAL PROJECTS

Portfolio – a deployed react project using Git Hub pages that showcase my skills as a full-stack developer / Programmer, highlighting technical expertise, and coding practices to potential employers and collaborators.

Anita Quick Cash - A standalone single page application (SPA) that can be used by several different companies. The companies may be able to leverage the system to be able to loan out their employees.

Online Ordering System – Thesis project highlighting e-commerce functionalities such as inventory management and ordering processes to help streamline clients' online orders
